March 28, 2000

Mr. Gerard J. Thibeault
Executive Officer
California Regional Water Quality Control Board
Santa Ana Region
3737 Main Street, Suite 500
Riverside, California 92501-3339

Dear Mr. Thibeault:

**Subject: January 2000 Data Reports
Water Supply Contingency Plan
Production Well Sampling Program
Crafton-Redlands Plume Project**

In compliance with the approved Water Supply Contingency Plan, enclosed please find one copy of the **January 2000 Production Well Sampling Program** report prepared by HSI Geotrans for Lockheed Martin Corporation. This report presents analytical results from samples collected at Bunker Hill Basin Production Wells in January of 2000. Laboratory Quality Assurance/Quality Control documentation is included in Attachment B of the report.

Should you have any comments or requests, please contact me at (818) 847-0791.

Sincerely,

Thomas D. Blackman
Technical Project Manager

Attention: Mr. Eric Hodder
Project Supervisor

Subject: January 2000 Data Report
Water Supply Contingency Plan
Production Well Sampling Program
Crafton-Redlands Plume Project

Dear Mr. Hodder:

This report presents a summary of results of the Water Supply Contingency Plan production well sampling for the month of January 2000. The Water Supply Contingency Plan (WSCP) was prepared by Lockheed Martin Corporation and submitted to the State of California Regional Water Quality Control Board (RWQCB) Santa Ana Region on September 30, 1996. The plan was conditionally approved by the RWQCB in a letter dated March 6, 1997. The WSCP for the Crafton-Redlands Plume was prepared to address maintenance of water supply to purveyors in the event that wells became impacted with trichloroethene (TCE) from the Crafton-Redlands TCE Plume. A summary of key dates and WSCP sampling program evolution is provided on Table 1.

The locations of the WSCP wells and analytical results for the January 2000 sampling event for TCE and perchlorate are shown on Figures 1 and 2, respectively. Table 2 presents a summary of analytical tests performed on each WSCP well and water system sampling point. The sampling frequency of each well is once a month for the first year. An alternate frequency, if required, is based on the analytical results as outlined in the WSCP TCE and perchlorate decision matrices, provided as Figures 3 and 4, respectively. The perchlorate decision matrix was presented in the *Perchlorate Work Plan and Schedule*, which was submitted, to the RWQCB on August 15, 1997. The RWQCB approved the

Perchlorate Work Plan on October 31, 1997. Table 3 presents a summary of the wells sampled twice monthly according to the decision matrices.

RESULTS

A summary of the analytical results for the January 2000 WSCP sampling event for TCE and perchlorate is shown on Figures 1 and 2, respectively, and presented on Table 4. Available groundwater elevation data is provided on Table 5. The water sampling field forms are provided in Attachment A. Chain-of-custody, laboratory data sheets, and Level III Modified laboratory quality assurance/quality control (QA/QC) documentation is provided in Attachment B.

Trichloroethene

Four groundwater samples collected in January met or exceeded 2/5th the MCL for TCE (2.0 µg/L) including: Gage 26-1 (8.3 µg/L), Gage 27-1 (7.1 µg/L), COLL Mountain View #2 (3.3 µg/L), and COLL Richardson #2 (4.2 µg/L). Gage 26-1 and Gage 27-1 were placed into TCE treatment in May 1999; therefore, they will be sampled once a month.

The TCE impacts observed at Gage 29-2 and Gage 29-3 are partially attributed to the Norton AFB plume and partially attributed to the Crafton Redlands plume, thus Gage 29-2 and Gage 29-3 are sampled twice a month for TCE when active. In January Gage 29-2 and Gage 29-3 were off-line and not sampled.

Water from COLL Richardson #2 was not pumped into the system and therefore a confirmation sample was not collected. The COLL Mountain View #2 well was off line for most of January, thus, a confirmation sample from Mountain View #2 was not collected.

The COLL Richardson Blend sampling point was not sampled in January because during the month of January, only the Richardson #3 well was pumping into the Richardson system. Thus, sampling of Richardson Blend was considered redundant.

Perchlorate

Groundwater samples collected from five wells in January met or exceeded 75 percent (13.5 µg/L) of the PAL for perchlorate including: Gage 92-1 (24 µg/L, 14 µg/L), COLL Mountain View #2 (40 µg/L), COLL Richardson #1 (30 µg/L), COLL Richardson #2 (47 µg/L), and the Mountain View Blend at Lawton (15 µg/L). Gage 29-2, Gage 29-3, Gage 51-1, Gage 92-1 and COLL Mountain View #2 wells are currently being sampled on a twice a month basis for perchlorate, if active. Gage 29-2, Gage 29-3, and Gage 51-1 were off-line in January and thus were not sampled.

The COLL Mountain View #2 well was off line and not sampled during the January mid-month sampling. A confirmation sample from Mountain View Blend at Lawton was not collected because only Mountain View #3 and Richardson #3 were pumping, which were both below detection limits for perchlorate. Thus sampling of Mountain View Blend at Lawton was considered redundant. A confirmation sample from Richardson #1 was not collected because the well was off line.

The perchlorate impacts observed at COLL Richardson #1 and Richardson #2 are consistent with historic data when both wells have been idle and sampled shortly after the wells are turned on. As stated above, water from both Richardson #1 and Richardson #2 was not pumped into the system and therefore confirmation samples were not collected.

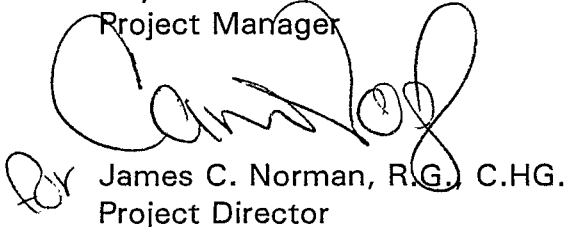

CLOSING

HSI GeoTrans greatly appreciates being of continued service to Lockheed Martin Corporation on this project. Should you have any questions or comments, please do not hesitate to call.

Sincerely,
HSI GEOTRANS

Roy J. Marroquin
Project Manager

James C. Norman, R.G. C.HG.
Project Director

TABLES

TABLE 1

KEY PROJECT DATES AND WSCP SAMPLING PROGRAM EVOLUTION

August 2, 1996, the RWQCB – Santa Ana Region requested Lockheed Martin to submit a conceptual Water Supply Contingency Plan.
September 30, 1996, Lockheed Martin submitted the Water Supply Contingency Plan (WSCP) to the RWQCB – Santa Ana Region.
March 6, 1997, the RWQCB conditionally approved the WSCP, which included sampling eight production wells (City of Loma Linda Richardson #1, Richardson #2, Mountain View #1, Mountain View #2, Victoria Farms Mutual Water Company Wells #1 and #3, and Southern California Edison #1 and #2).
June 1997, Victoria Farms Mutual Water Company was connected to City of San Bernardino Water. Pumping ceased at VFMWC #1 and #3, and the two wells were removed from the program.
June 1997, sampling of SCE #1 was discontinued because it is not operated on a regular basis. The WSCP consists of five wells, including COLL Mountain View #1 and #2, COLL Richardson #1 and #2, and SCE #2 (AUX).
August 1997, the WSCP was expanded due to the detection of perchlorate in municipal supply wells in the Bunker Hill Basin. Twenty-six wells were added to the WSCP including nineteen City of Riverside wells, five City of Redlands wells, and two Loma Linda University wells, for a total of 31 wells.
October 1997, three City of Riverside water system sampling points were added to the WSCP, including the Gage system pipeline (Gage Delivery), the Waterman system pipeline (Iowa Booster), and the sampling station measuring outflow from the Linden and Evans Reservoirs (7 th & Chicago).
March 1998, two City of Loma Linda water system sampling points were added to the WSCP, including the Mountain View system pipeline (Mountain View Blend at Lawton) and the Richardson system pipeline (Richardson Blend).
June 1998, one City of Riverside irrigation water system sampling point (Gage Arlington) and one additional City of Loma Linda water system sampling point (Mountain View Blend at Timoteo) were added to the WSCP.
December 1998, the COLL Richardson #3 well was added to the WSCP Sampling Program.
May 1999, Sampling of Mountain View Blend at Timoteo was discontinued because it does not represent a blend sample of the Mountain View pipeline system.
December 1999, the COLL Mountain View #3 well and the Gage 98-1 well were added to the WSCP Sampling Program.
